The interFX plug-in provides the ability to dynamically load, initialize, and apply any of the available effects to the input of each channel of the mixer. In addition to this functionality, interFX can also be used as a standalone channel expander and compressor, so that you can switch instantly between a compressor or expander at the push of a button. The effects used with interFX are defined as VST Plug-ins. The available effects are all free for download from the VST plugins section of my website. I would like to give credit to the developers of the VST Plug-in effects included in interFX. A list of the developers, can be found here. interFX Features: Four in-the-box channels that can be expanded up to four times Two in-the-box channels that can be compressed up to two times Eight user-defined channels Four user-defined bands Phrase mode InterFX comes complete with the following effects: Level Expander Dynamically adjusts the level of each channel of the mixer to make sure you get the best sound you can. Compressor Compresses the input level of each channel of the mixer Echo Creates an echo effect that allows you to hear the sound that was just processed Delay Creates a delay effect that applies to each channel of the mixer Multiband Compressor Sets up a multiband compressor Multi-Band Expander Sets up a multi-band expander Note: When working with a multiband compressor, be sure to set the frequency of the filter at the top of the window to the lowest frequency of the input and output you want to process. I have found that setting it to 32 Hz (the lowest frequency of the NRV10) works better than 44.1 kHz (the default setting). Channel Sequencer Generates an automatic sequence of either the Compressor, Expander, or Both together. InterFX Settings You can set up to four channels in interFX. After launching the software, simply use the per-channel Expander-Gate and Compressor, and choose up to two user-definable VST effects per channel. Inputs You can choose up to four mono or stereo input sources. You can

The KEYMACRO virtual keyboard macro system allows you to quickly control a virtual keyboard from a MIDI device such as a MIDI controller. This is useful for live keyboard usage, when you need to quickly select some notes or macros. There are two versions of the KEYMACRO virtual keyboard macro system. The original version is optimized for controlling the NRV10 Mixer, and includes a macro system that is the same as the NRV10 Mixer. The new version, simply called KEYMACRO, supports keyboard macros for general MIDI use and does not have any mixer functionality. With the 64-bit version of the DAW Suite, you will get even more possibilities with your Windows PC. For example, you will be able to create presets and send them

to other audio software via MIDI. This allows you to easily use the preset when needed. There are also more features, such as the supported software of different versions and the possibility to make your own macros. This makes it possible for you to make your own instruments or expand the functions of your software. New NRV10 Mixer Exclusives As part of the new upgraded NRV10 Mixer, Livid's NRV10 Mixer Studio has the following features: Bass/Pitch: There is a Bass/Pitch control that allows you to adjust the low frequency components of your audio. You can set the Bass and Pitch parameters from 0 (zero) to 12. The Bass parameter sets the bass (low frequency) content of your sound, while the Pitch parameter sets the pitch. When you adjust these parameters, a graphical view of the Bass/Pitch behavior in the Mixer is shown. This allows you to quickly see what the result of the Bass/Pitch settings will be. New NRV10 Mixer Features The NRV10 Mixer has the following new features: 1.Powered USB hub The NRV10 Mixer now has a powered USB hub. This greatly increases the compatibility of USB devices connected to the mixer. You can connect many different types of USB devices to the mixer now, including keyboards, smartphones, digital audio interfaces, and more. The USB hub also helps to protect the mixer, because it allows the mixer to work with very noisy environments.Attorney General Jeff Sessions has apparently returned to the old practice of not recusing himself from high profile cases and is accusing his 1d6a3396d6

Launching interFX, from the main menu, you will see a new panel called "InterFX". From this panel you can access the settings for interFX, and create a new channel. In the image below, we see the "InterFX" panel, listing the four channels that are available on the NRV10 Mixer. Figure 8. InterFX Menu. Here we see the main window of interFX, showing one of the four interFX channels and one of the four NRV10 Mixer channels. Figure 9. InterFX Main Window. In the image below, we see the four "InterFX" channels, each with two user-definable VST effects. Figure 10. InterFX Channel Controls. We see the four channel controls. The names of the interFX channels are displayed in blue, the NRV10 Mixer channels are in black, and the source channels are represented by colored segments. The Source Channels are directly connected to the VST Effects. Figure 11. InterFX Mono Channels. Here we see the four mono interFX channels, labeled "Ch.A", "Ch.B", "Ch.C", and "Ch.D". Figure 12. InterFX Stereo Channels. Here we see the four stereo interFX channels, labeled "St.R" and "St.L". Figure 13. InterFX Channel A and Channel B. We see the two interFX channel controls for each channel. The horizontal axis shows the position of the controls on the VU meter, and the vertical axis is the control knob on the NRV10 Mixer. Figure 14. InterFX Channel A. We see the A channel control for the A channel, which consists of a button and a switch. Figure 15. InterFX Channel B. We see the B channel control for the B channel, which consists of a button and a switch. Figure 16. InterFX Channel C. We see the C channel control for the C channel, which consists of a button and a switch. Figure 17. InterFX Channel D.
