Hypothetical trading in an online brokerage account has many advantages but also some drawbacks. Here, we will explore the characteristics and the advantages of doing short-term or long-term trading online. Short-term trading is more common than long-term and we will explore the advantages of short-term trading using an online brokerage account. Short-term trading takes

place over the course of a day or week. This is a method that is not very suitable for the long-term. Short-term trading gives you the opportunity to participate in the best cycles and is accessible at any time of the day and from any location. Short-term trading usually costs less than long-term trading in forex, equities and commodities. In addition, the number of brokers is much lower than for long-term trading. Moreover, short-term trading allows you to take risk lower and keep more capital on the account. The draw back of short-term trading is that it does not work like in a traditional trading system. Short-term trading is prone to an increase in draws and falls due to technical or market reasons. A long-term trading would make you accessible to draw down and loses. The only advantage of long-term trading is that the losses are commensurate to the risks. Advantages of Short-term Trading The primary advantage of short-term trading is that you have direct access to the market. A long-term trading gives you the opportunity to monitor the market for several days or weeks. However, the risks of long-term trading are much higher. The market has its up and down cycles. The markets have different movements. The advantage of short-term trading is that it is a custom made for you. It allows you to trade according to your needs. The trading activity is carried on the same schedule that you prefer. Short-term trading is more readily accessible and gives more chances of success. You will have access to more information from your broker and

the broker will give you the proper advice. The downfall of short-term trading is that you can easily fall victim to losses that have not been pre-conceived. Short-term trading gives you the opportunity to place limit orders and also take advantage of the volume of shares at a higher price. With short-term trading you do not need to be physically present. You can carry out your trading activities b7e8fdf5c8
