Welcome To... Chichester 2 is a web based interactive fiction text adventure written in the Ren'py scripting language. Work began on the original project in 2011 and continued off and on until 2013. The second installment was a full time project from January 2014 to May 2016. It's a linear story, slowly unfolding. When the player tries to exit the story, the game will end unless the player chooses to proceed. After finishing the story, the player may have the option to continue on a series of challenges. When you begin the game, you'll need to create your character. Your first step in creating your character is to be assigned an "economy" which gives your character a good or bad reputation and a personality trait. Welcome To... Chichester 2 will be available as a private offering which will allow players to obtain refunds for your purchase should they wish to stop playing. Why is the game not available for free? It's hard to be giving things away for free. When you think of games like the Sims, The Sims Online and World of Warcraft there are a great many things that are given away as freely as possible. The models, textures, icons and other assets are all given away for free to the player along with the download. As such I was always reluctant to release anything for free on a game that is not entirely a labor of love. I've released myself as a public service and am not making a profit from it. You can't buy anything in the game, so there's no real selling it to you - I'm just doing it for myself. For that reason the game is not intended to be shared on any blogs or forums. Have I put some of the playability aside to have more time to work on the graphics? Probably. There's a practicality aspect here. The main

focus of this release is to provide a playable, stable and fast executable. I may come back to it in the future with some improvements to the graphics and to the game's efficiency. Also I've had to make the game look as similar to the original release as I could to provide continuity to players. I've made a series of simple tweaks to the graphics and to the text areas, but there will be some significant improvements in future. Can I ask for updates? I'll try to answer any questions you may have. In the meantime I'm happy for you to contact me if you have any technical difficulties. If you've found problems or

Shipped is a local multiplayer action sailing game with a focus on simplicity. It makes use of the four cardinal directions of a camera to allow players to view what the other player is doing. Shipped is a game for local multiplayer that is all about the challenge. It was created and playtested in the Vive Focus. Gameplay Introduction: You're a ship commander. Guide your ship through dangerous waters to get to safety. Avoid hazards such as pirates, icebergs and mines. Grab crates to get ammunition or shoot air with your empty cannons to push enemies or deflect incoming fire. Take cover behind your ship. Grab

crates to power up your cannons or shoot air to push enemies. Balance is everything. The map size might be a little small, but it will expand as the gameplay progresses. The ship design is heavily inspired by the movie 'Gravity' and its concept of a danger of space travel. The character designs are based on the comic book of the 'Flintstones' show.

Ports: In the near future, space travel is starting to become a reality. Humans embark on journeys through space to find new resources and new lands to colonize. A short time ago it was all about the stars, but with so many people going into space, there's more danger than ever. A group of humans take refuge on the ship 'Shipped' when a freak storm forces the ship to crash in ice. They embark on a desperate journey to the nearest port to escape the frozen wasteland. The reason they're going into space in the first place is to mine for valuable resources, but the meteor shower that shattered their ship interfered with their ship's navigation system and the crew is lost. It's up to the player to help them survive. Players can connect a second Vive, HMDs and controllers to the system. It supports SteamVR tracking.

What's next for Shipped? The next content update will be a selection of new game modes. It will bring online play, new effects and new ship types. It will be free.

Frequently Asked Questions: Q: How do I download Shipped? A: To download the game: 1) Download and run the.msi installer. 2) It will download about 60MB of game content. 3) Make sure the VR mode is set to Bluetooth in SteamVR Settings. Q: How do I load a game in multiplayer? A: In Multiplayer you can lock your current game to have c9d1549cdd

What's new in The Signifier Director's Cut:

Bullet Girls Phantasia received a bunch of reveals for fans at E3, but I'm going to focus on Mai. She's my favorite character because she is the "starter" version of the characters that already exist in the Android games and she is my favorite Anime Series in general. I was lucky enough to be invited to Kotobukiya for a playtest session of the first chapter of the game and to give Mai her first appearance. I fell in love with her instantly. Due to the nature of the meet and greet, Kotobukiya was not able to give us the original prototype for a trial. I will cover how we tried to recreate it with high quality materials. Credit: Kotobukiya Disclaimer: I am a paid Kotobukiya employee. Deck out Mai's outfit: The base of the armor was designed with several pieces that had to match together, center piece, shoulders, wrist, neck, base of feet, foot, thigh, and knee. Start building the

base of the armor: All the pieces were made of high quality ABS plastic so it was initially painted with two coats of black acrylic paint. Switch gears: I added a lace skirt as the majority of the costume is a transparent PVC material, I added some added bulk to the skirt by taping her skinned body parts to it. Do some stretching: I originally had to make the parts too big to fit together, so I had Mai take a dancing pose. While she was posed doing this her legs were held close to her body and she fell apart so that I could get her leg pieces to match. It may look a little odd, but that's because I did not have all of the pieces together at this point. It took additional adjustments to get the part to fit right. New pieces: As I was in the process of making her armor, I broke out the Anime White body mold and swirled her skin with acrylic paint to match the base coat of black. The white felt great against the black. And now a closer look: This is where the fun really

starts. I carefully removed her skin and started hooking in the costume parts. I used a mixture of nylon loop and zip ties to attach the parts of her costume together. Attaching the skirt to the base of the costume: Since
