This game is recommended for the Oculus Rift, Oculus Rift S, and Valve Index VR headsets. It is also compatible with the HTC Vive and HP Reverb, but these controllers will not be used. The game will use the virtual keyboard and mouse controllers for input, or it can be played using the trackpad or gamepad on the Rift S. How to Play: - This is a VR experience for all ages. - Choose your order and which puzzles you'd like to work on. - Each room is designed to be completed in 30-90 minutes and each room is on a separate

page. In-game "QR" codes link to the next page. - Each room has a range of puzzles and secrets. - You can exit the room and jump back to it by using the "Return to Room" button. - To escape the room and end the game you must find all the puzzle pieces. - There is no time limit on each room. If you get stuck during a room, you can use the "View the Manual" link in the game menu to access hints for the game. - The game has one difficulty level for all ages, and the puzzles get harder as the game continues. - There are no guest puzzle-solvers as this is a single-player experience. - To avoid spoilers, the game hints are separated into pages. Hints are identical on all pages. - The game supports closed-captioning so the hearing impaired or deaf audience can get access to the hints and solutions. - Please note, the game manual does NOT have the spatial sound for the Oculus Rift S. You're in a place you've never been before. A beautiful, spooky, and haunted house. You're in there with your friends in search of some real answers and an escape from the real world. Unlock the Mysteries of Vaudeville Manor: This 3D house has secrets to be discovered. Go on an adventure to solve the mystery of this mansion filled with escape room puzzles and hidden clues. Let's go to Vaudeville Manor. Learn about Vaudeville's History: Vaudeville was a theatrical movement that was popular starting in the 1800s up until the 1920s. It encouraged the exploitation of the lower class, or the "common folk", which referred to the working class or immigrants. It was often times called vaudeville because it was a kind of show that people went to rather than a show people went to see. It was very popular because it was the first time that many working-class people had had the chance to go to a theater.

Vaudeville was mostly filled with variety acts (like vaudeville acts today), comedy, acrobatics, and some pretty great music. Some vaudeville performers got famous, some vaudeville performers got arrested, and some vaudeville performers died.

How to Play The Game: This game is single-player. You play through five different rooms in this lovely mansion in an attempt to get clues and solve puzzles. There's one difficulty level for everyone, and one room for each age group. What You'll Need

To Play: Each game requires an Oculus Rift, Oculus Quest, Rift S, HTC Vive, Valve Index, Windows Mixed Reality, Oculus Go, and an OpenVR-compatible headset. How

Available on mobile and desktop. Minimum system requirements: Windows OS: Windows 7+ Steam: Valve Index+ or AMD GPU OSVR: Windows 10+ Intel CPU: Core i3 GPU: Nvidia GTX 970+ HDD: 2GB+ VR Steam Link Apple TV+ iOS+ Android+ Compatible Apps: OpenVR-compatible headsets: Oculus Rift, Oculus Rift S, Valve Index, HTC Vive, HP Reverb SteamVR-compatible headsets: Oculus Quest Mobile Devices: HTC Vive, HP Reverb, Oculus Quest Mobile PlayStation VR PlayStation VR Aim Controller Xbox 360 Controller DualShock 4, XBOX ONE controllers This game supports both keyboard and mouse. While you can use a controller, you may also want to play with a VR-compatible gamepad. You can also use the game on mobile. The game is designed for OpenVR and SteamVR, but works with all VR devices that support OpenVR. You'll get the most out of this game if you have a GPU that supports at least 1GB of video memory. The computer version requires an Intel CPU with at least i3 and at least 4GB of system RAM. In game, you can use your own headset, VR-compatible controller, mobile phone, and tablet; the maximum configuration tested is a desktop PC with an AMD R9 290 or NVIDIA GTX 970 GPU, a laptop with an Nvidia 1080 or later GPU, a HTC Vive, Oculus Quest, Oculus Go, Oculus Rift S, Valve Index, HP Reverb, Playstation VR, or Xbox One controller, and an iPhone 6s or later. You can try the SteamVR version of the game on an Apple TV+ in 4K and may be able to use an Oculus Quest Mobile. That said, we will not be supporting headsets or mobile VR here because they're different mediums with different user experience needs, and our main goal is to support SteamVR. You can use other controllers, and we expect to release a version of the game that supports various other controllers as well. If you find that your experience is sub-par, please submit a bug report with as many details as you can provide. There's a lot of detail involved in making games for VR, and your feedback helps us find and fix problems. We also have an active subreddit where you can post feedback and bug reports, or ask questions about the

What's new in Escape Room VR: Vaudeville:

Game Review In Escape Room VR: Vaudeville you have to go up to the top of the theatre to take two envelopes that you think are locked up inside one of the boxes. The first envelope looks like a normal sealed envelope and one of them is actually a comb. Then all of the other boxes aren't sealed, they're just cardboard and the player must solve the puzzles to get the correct box. When you open the desired box you get clues, which you can figure out by jumping to the next part of the room. The puzzles are more complicated than what most of people would think. Even though the start of the game is easy and straightforward. Once you've completed it, the start of the puzzles are more interesting, tricky, and require more thinking than being able to jump into the boxes. There are two parts to the puzzles, one of them has the comb, then we have the box, then the next puzzle has the comb

and the box, and so on. When you get the correct combination you will see the fastest time that is been tested on videos. There are times where the puzzles are difficult and time consuming. If we consider this to be true, there are some challenges that limit time, especially if there's a version of the game that you can choose between. Like the normal game or the follow the leader version of the escape room where the game leads the person? There are infinite sliders with different variations where you can limit the number of times you can press one button. Like 1 button only, 2 buttons, 3 buttons, and up to 5 buttons. The controls: As soon as you start the game in the beginning you have to teleport in the middle of the room, there's a sign that says "none of these are real, you're not in a room" then you find the start of the puzzle. There's a button on the controller that looks like a compass. If we press the right button on the controller, the interactive feature will turn on, and push-

on it in a direction. If you want to go forward in the room you should push on it with the right button then it will push away instead of in the direction that you wanted. If there's a square after the button it will let you push it in any direction.
