When you try to edit images in Photoshop, you see a preview of the final image in the Photoshop window. Although you don't see how the file will look when printed out or displayed on the computer screen, you do get a good idea of how the picture will look on a finished product by looking at the preview window. In this chapter, we explain how to create and edit images in the Photoshop environment. We start with the basics of the tools you use to create and edit images: The Rectangle Tool, the Pen Tool, the Brush, the Magic Wand, and the Lasso Tool. We then cover selections, layers, and raster and vector tools. Photoshop gives you the opportunity to organize layers and groups in the Layers panel, which you find in the Layers panel's Structure area. After you create and organize the layers and groups, you can apply various effects (effects and filters) to the layers and groups. In addition, we cover how to apply color variations to images and how to work with the node editing system in Photoshop Elements. Note that although we do cover the basic operations, this book's reviews are designed to explain the fundamentals and not to show you how to be a great Photoshop pro. If you want to learn the technical details of the interface, take a look at

the Photoshop book from the Windows version, Adobe Photoshop CS6: The Complete Guide, by Andy Rathbone and David Luxton. Finding the Rectangle Tool The primary tool for creating, editing, and manipulating images in Photoshop is the Rectangle Tool. You use the Rectangle Tool to create shapes, move and resize objects, add objects to the image, and edit the edges of shapes and objects. You also use the Rectangle Tool to select and edit portions of an image, create a selection, and draw free-form shapes. You can select different shapes in a variety of ways, including with the Lasso tool and Magic Wand. You also can use the Pen tool to create shapes, adding to or changing the shape's position. You can flip the image, rotate it, and move it to any position in the workspace. Figure 2-1 shows a close-up of the tools on the right side of the Tools panel. **Figure 2-1:** The Rectangle Tool (left) and Pen Tool (right) are part of the Tools panel. Accessing the Tools panel Photoshop has a lot of tools, so you need a

However, be aware that the license agreement in the installer may not apply to you unless you are the owner of the operating system. You can read the license agreement for Windows 8/10 and Mac OS X/OS X Lion. The legal notice can be added to System Settings → About the System → Licensing. Open Photoshop Elements and start working. Like Photoshop, it comes with many features. However, it is far less intuitive than Photoshop. Let's check the available tools and learn how to use them. Image Adjustment Tools The Image Adjustment tools are a collection of tools that can be used for various tasks in Photoshop. These tools are all located in the Image / Adjustments / More / Image Adjustments menu. To use any of these tools, click the icon at the right side of the tools list. There are 11 adjustments in the menu. If you don't want to configure your image, you can also adjust colors or brightness and contrast. The Adjustment / Brightness / Contrast dialog box opens up and you can adjust the values. You can adjust the settings for the whole image or for a selected area. Use the Auto button to apply these settings to the image. You can click the eye icon next to the Color Levels to switch between grayscale, RGB and CMYK (color modes). You can select an option with the triangles next to the color mode. The Edit menu contains

all the tools that have been discussed below. Blur, Sharpen, Smudge and Liquify The Blur, Sharpen, Smudge and Liquify tools create a blurry or sharp effect on a photo. Use the Blur or Sharpen tool to create a blur effect or apply edge enhancement. Use the Smudge tool to blur the pixels by manipulating the color of an area. Use the Liquify tool to distort the image by moving the anchor points or dragging the corner handles. You can also use the Lasso tool and Elliptical Marquee tool to create a blur or sharp effect on a 05a79cecff

Q: Detect when any cell in UITableView has been touched I want to detect whether any cell in my UITableView has been touched, and if so, draw a semi-transparent image next to it. I've seen how to detect if a cell has been selected, but I can't figure out how to detect if any cell has been touched. A: Try this code it may be of help to you -(void)touchesBegan:(NSSet *)touches withEvent:(UIEvent *)event { UITouch *touch = [touches anyObject]; if ([touch view] == self.imageView) { NSLog(@"Clicked"); //Do Something.... } else if (touch.view.tag == 1) { NSLog(@"Clicked1"); //Do Something.... } else if (touch.view.tag == 2) { NSLog(@"Clicked2"); //Do Something.... } } -(void)touchesEnded:(NSSet *)touches withEvent:(UIEvent *)event { //Your code is here } A: In your TableViewDataSource, implement didSelectRowAtIndexPath -(void)tableView:(UITableView *)tableView didSelectRowAtIndexPath:(NSIndexPath *)indexPath { //This will be called whenever a cell is touched } If you want to draw a image along with cell, just add that imageview as subview of cell and make sure you set the userInteractionEnabled to NO (remove this if you want this view to respond to user input like touch). A: Use

this method to detect when a cell is tapped. Add gesture recognizers to any view (I'd suggest the view containing the tableview in this case). Then update your tableView:cellForRow

We are the sick and the twinkie-loving people who need a cure for this epidemic We are the sick and the twinkie-loving people who need a cure for this epidemic December 20, 2003 Media: BulletinNet Reasons for Twinkie-Eating One reason the refrigerator food market exploded into such frenzied carnivorism is because of the low cost of refrigeration. It took a long time for the refrigeration cost to be lowered. But with free energy from the sun getting more efficient and a larger thirst for refrigeration, we have reached an economy where people can afford to throw away all the useful food at the end of its useful life. This rising cost of refrigeration is the primary reason Americans waste millions of perfectly good Twinkies, Snickers, Pillsbury biscuits, KFC/McDonald's chicken wraps and other rotting food. Nutritionists tell us that people wasting food at a rate of four pounds of food per family per day (46 pounds per family per week) is far worse than smoking 12 cigarettes per day (or two cigarettes per hour). Yet no

one worries about the incineration of cigarettes but we have sent the Twinkies to the curbside curbside trash collection. Older parents and grandparents are often shocked at the amount of food being wasted by young adults. The food that young people treat as garbage has often gone bad just moments earlier. Their coolers are overflowing with food that the children will not eat or won't even know how to prepare for supper. Every day people throw away perfectly good food. Americans waste $51 billion of food each year. Other industrialized nations have smaller waste rates. Energy efficiency has caught up to the technology that keeps our refrigerators cold, and more Americans than ever are buying refrigerators. Refrigerators are the most commonly purchased appliance in the country. The trend is toward refrigerators as opposed to other appliances. We have become more energy efficient and efficient uses of energy pushed us toward waste. We have moved from two refrigerators to three. The freezer now becomes a usable storage place at a lower cost and performs more functions
