istvan csar - 1/14/2020 - developer, artist and content manager at tinybuild. last month, we celebrated mojang's 20 years on the minecraft scene and announced the next big update: "the basement" . we give you an overview of this huge update, which is now heading to the public test server. raft is a sandbox build and burn game. it takes its cues from classic dungeon crawlers, but with subtle additions. design and programming is a work in progress, so at this point in time, there is no official release date. raft can currently only be played on windows, pc. the game is designed to work with both oculus and vive controllers. as said previously, we are also working on console support, but until the publishing process is approved and the game is released on each platform, we don't have any specifics to report. the team at the studio is very familiar with the juggernaut series. our developers previously worked at that giant of franchise. following pubg, we continue to refine the game and make it better for our players. that's why most of the updates and features that were made at pubg will be already introduced in the sequel. the game does suffer from frequent server errors. typically the problem may be caused by a massive client influx of players, which can severely impact the servers' performance. [1] the game is also extremely resource-intensive and requires a steady internet connection for performance, so be sure to be playing on a stable connection. this is especially noticeable if you are playing on a mobile device, as many android devices cannot handle more than 6 players without stuttering and crashing.
