Minecraft Xbox 360 Update Download Usbl |TOP|

i cant get minecraft to work with the xbox 360 controller. i have it setup on windows 7 x64 pro. i have a microsoft xbox 360 controller and am using minecraft to play it. i get the message "you have not connected to xbox live". i have signed in with my xbox live code and i have pressed the play button and i get the message "could not connect to xbox live". i think i need to be in the right xbox live profile to get the code to work. ive tried re-installing java, both 32bit and 64bit, restarting, disabling the firewall, disabling java, and deleting the files and folders in my temp folder. if i try to use the web start, it just says "unable to locate java runtime environment" or "error while loading the jvm" im at a loss. my friends mouse works fine, and i have no issues with minecraft clients or others. so why is it causing this? please help!!! i used this and it did not work. upon the update it told me i had to go to the internet and download it and install it like that. i did that but it did not work. it still did not update the client. so i uninstalled it and tried updating it again but still got the same message that it needed to be updated through the internet and i did that and it still did not work. so i uninstalled it again and tried updating minecraft and it still did not work. so how do i update minecraft and make it work? i had a little problem with the updating thing, it said that i was missing java and didn't tell me which java was

missing. so i went to my downloads, and it said that i had the version i needed. also, i did not even get the opportunity to see what java i needed, or if it was even available in that version. but i guess this is common since i have the jre version 6 update 12 and i am using windows 7 64 bit. so i just went to my desktop, clicked on jre6u12-windows-i586.exe and it opened up a dialogue window that said "are you sure you want to install the jre software" and i said yes. it then downloaded it and installed it. now, i can see my jre6u12-windows-i586.exe in the downloads folder but it is not on my desktop. do i have to restart my computer in order for this to take affect? because i am unable to start minecraft, and i have tried to start it, but nothing happens. i even try to run the game and it doesn't run and says "minecraft has stopped working". so how do i install this jre?
