Now you can take a test marker and use it to get the spot right, and if there are other regions that match, Photoshop will automatically fill in the missing area. There's an **Layers**

**Panel** option that gives you a new way to visualize and edit folders. You can access the layers panel by holding the Option (Mac) or Alt key (Windows), and you can drag icons (that indicates active layers) around in the panel, or they'll automatically move to where you drop them. The Illustrator style layer compactor has also been changed, with new icons and the ability to create and edit squares, circles, and ellipses, along with resizable vector paths. You can layer in any path you like, just choose from the "New Artwork" options for vector layers or "Create Vector Shape" for paths.
